DALY.SMITH

EXPERIENCE YOU CAN TRUST

With continual advances in surveying technologies, Daly.Smith remains on the cutting edge. Now incorporating Drones into our surveying practices, we continue to offer a wide range of services spanning multiple aspects of land development projects.

When used in conjunction with more traditional surveying methods, we can increase the amount of data being collected and reduce the amount of time collecting data. This allows us to deliver an efficient and cost-effective product.

By capturing multispectral ultra-high-resolution imagery and through the use of geo-referencing orthostatic software, we use photogrammetry to produce the following services:

- Stockpile Volumes
- Earthworks Volumes
- Volume Reconciliation
- Large Scale Detail Surveys
- Land Development Surveys
- Inspection of Dangerous Areas
- Contour Plans in Hard to Access Areas
- Building and Structural Inspections
- Marketing Media

We are achieving accuracy to 50mm and volumes within 1% of other survey methods.
