

## ENGINEERING CAPABILITIES

Daly.Smith offers expert civil engineering services for projects ranging in size from single dwellings and dual occupancy developments, to multi-stage, master planned estates.

Our team of engineers are highly skilled and professional in providing a wide range of engineering services to our clients. We work closely with our client in a project's infancy to identify engineering requirements early and develop strategies to address these. The strategies we develop centre on practical and cost-effective design solutions that efficiently achieve their purpose and help our clients' bottom line.

Over our many years of operation in the region, we have built strong relationships with consent authorities and work with them through the development process to ensure efficient approvals.

Our engineers are members of Engineers Australia (EA) and undertake continual professional development and training to ensure best practice design methods are utilised and our high standard of service is maintained. We are Hunter Water Corporation (HWC) accredited design consultants and specialise in routine minor/major works projects.

The integration with our surveying and planning departments gives our team unique and diversified skills that provide our clients with an optimised and whole service.

- Road Design
- Driveway & Car Park Design
- Earthworks & Regrading Design
- Erosion & Sediment Control Design
- Stormwater Management Strategies
- Stormwater System Design
- Stormwater Retention Design
- Stormwater Detention Design
- 1D/2D Integrated Modelling
- Flood Studies
- Water Quality Facilities Design
- MUSIC Modelling
- Potable Water Reticulation Design
- Sewerage Reticulation Design
- Hunter Water Minor/Major Works
- Construction Supervision
- Dilapidation Reports
